Ecopia AI

A National View of Transportation Assets: Unlocking Smarter Planning and Design

Thomas Peck, Senior Associate

Transportation projects are often slowed by fragmented, outdated, or incomplete existing-conditions data. This session explores how a nationwide, high-resolution transportation asset dataset can eliminate those gaps. By providing a consistent digital foundation of roads and infrastructure, Ecopia's nationwide build-out enables faster project delivery, better planning outcomes, and more informed investment decisions. Real-world applications will demonstrate how teams are replacing manual data collection with scalable, ready-to-use AI intelligence.

Wednesday, June 3, 2026

12:00 – 1:00 PM ET
